

MODEL 816 TRUCK GAUGE PROGRAMMER

OVERVIEW:

The Truck Gauge Programmer is a state-of-the-art calibration and diagnostic tool used with Garnet Instruments' popular line of truck gauges. It is used to calibrate SeeLevel truck gauges in inches or user-defined volumes (such as cubic meters or barrels), set offsets for different sender bar lengths, and configure alarm settings. It also contains many diagnostic functions for testing sender bars and displays and measuring optical power.

FEATURES:

- *The Truck Gauge Programmer is now enclosed in a convenient hand-held package.*
- *Operates on six ordinary alkaline AA's.*
- *The Programmer's software is easily upgradable.*
- *Comes with 32 memory locations.*
- *Batteries are field replaceable with no memory loss.*
- *Display is backlit for easier viewing. Can be turned on when needed and turned off to conserve the batteries.*
- *Enclosed in an aluminum case to help avoid errors due to interference and static electricity.*
- *Two year warranty.*
